Human polynucleotide SEQ ID NO 12231.

```
The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the CDNA and genomic sequences polypeptides (of a control of a compare polypeptides of the invention may comprise the encoding them. The enzyme polypeptides of the invention may comprise the functional classes of xidoreductases, transferases, hydrolases, lyases, commerases or ligases. The sequences of the invention are useful in the isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), communodeficiency disorders (e.g. Alzbiemer's G.g. cancer), disorders (e.g. phenylketonuria), autoimmunodeficiency disorders (e.g. Alzbiemer's disorders (e.g. asthma), corrections disorders (e.g. atherosclerosis), blood-related disorders (e.g. theoremophilia), reproductive disorders (e.g. infertility) and corrections disorders (e.g. Influence). The polymucleotides of the infertion can also be used in gene therapy. AAS40785-AAS41684 represent companies encoding for the novel human enzyme polypeptides of the companies encoding for the novel human enzyme polypeptides of the companies encoding for the novel human enzyme polypeptides of the companies encoding for the novel human enzyme polypeptides of the companies encoding for the novel human enzyme polypeptides of the companies encoding for the novel human enzyme polypeptides of the companies encoding for the novel human enzyme polypeptides of the companies encoding for the novel human enzyme polypeptides of the convention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly companies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   405
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               225
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    274
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                334

Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders. gene therapy; Human; cytokine; cell proliferation; cell differentiation; gene the vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss. invention relates to human polynucleotides (AAI79941-AAI93841) Claim 1; SEQ ID NO 12231; 1399pp + Sequence Listing; English. Liu C, Drmanac RT; 26-FEB-2001; 2001WO-US004927. 28-FEB-2000; 2000US-00515126 18-MAY-2000; 2000US-00577409 2001-514838/56 (HYSE-) HYSEQ INC P-PSDB; AA012240 WO200164835-A2 Homo sapiens 07-SEP-2001 Tang YT,

the encoded proteins (AA000010-AA013910) that exhibit activity elating of orbotics (AA000010-AA013910) that exhibit activity elating to broduction of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, activity, tissue growth factor activity, immunomodulatory activity and activity, and may be useful in the diagnosis and/or inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

ABK30453
```

The invention relates to an isolated human protease nucleic acid molecule comprising a nucleotide sequence of 546 base pairs, one of 268 fully defined in the specification. Also disclosed are production of an isolated polypeptide enroded by the nucleic acid, comprising introducing the nucleic acid into a host cell and culturing under conditions to compenent from the nucleic acid, use of an antibody to detect the nucleic acid into a sample and culturing under conditions to che encoded protein in a sample and to modulate its in vivo activity, identifying agents that bind to the protein and identification of a complement (i.e. gene therapy). The nucleic acid can be used to identify an agent that modulates the expression of the nucleic acid or identify an agent that modulates the expression or activity of the nucleic acid, and can be used to isolate the protein. The nucleic acid expression or activity in the context of a biological sample (e.g., blood, serum, cells, tissue) to determine whether an individual has a disease or disorder, or is at risk of developing a disease or disorder, associated with aberrant expression or activity of the nucleic acid. The nucleic acid can be used to detect mutations in protease genes and gene compared to detect naturally-occurring genetic mutations in protease gene. The nucleic acid can be used to district and antagonists that can be used to disgnose and treat protease mediated disorders e.g., proliferative, differentiative, developmental or haematopoietic disorder. The nucleic acid can be used to determine patterns of gene component sequence represents and to construct transgenic animals. The contrans and antagonists and to construct transgenic acid and be accepted to the procession of the 268 disclosed human G-proteincoupled protease con sequences

Sequence 722 BP; 189 A; 186 C; 145 G; 196 T; 0 U; 6 Other;

sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                      1962
                                                                                                                                                                                                                                                                                                                                                                                              2022
                                                                                                                                                                                                                                                                                                                                                                                                                                                      2082
                                                    The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       274
                                                                                                                                                                                                                                                                                                                                                                  214
                                                                                                                                                                                                                                                                                                                                                                                                                           154

The introduction relates to a spatial production in a sample excurance in the condition of the condition of the condition of the condition of detectably labelled mucleic acids derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled mucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TCCTCTGAGGACTCTGACGAGGAGTCAAAGGGGCTGGGCAAGGAAATGGGATTGGTACG 1962

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1962
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2022
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast diseases and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           274
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel single exon nucleic acid probe used to measuring gene expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    94

Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples.

Claim 4; SEQ ID NO 15554; 634pp; English.

1071/c AAI13071 standard; DNA; 498 BP.

AAI13071,

AAI13071;

nucleic acid probes for measuring gene expression in a sample exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 complements or the 12387 open reading frames derived from the 12614 complements or the human lung measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung massuring spene expression in a sample collection of detectably labeled nucleic acids derived from human lung array; identifying exons in a eukaryotic genome, comprising (a) calgorithmically predicting at least one exon from genomic sequences of algorithmically predicting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single gene, algorithmical exone exon from genomic sequence of in the above mentioned microarray; assigning exons to a single gene, above and (b) measuring the expression of each of the exons in several comprising (a) identifying exons from genomic sequence of tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of invention relates to a spatially-addressable set of single

expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORP). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (COPD), interstitial lung disease (LLD), familial idiopathic pulmonary fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-budlak syndrome, sarcoidosis, pulmonary fibrosis, pulmonary budlak syndrome, sarcoidosis, pulmonary alveolar proteinosis, dyskinesis, pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hybride membrane disease. Probe #3004 for gene expression analysis in human cervical cell sample. Probe; human; microarray; gene expression; cervical epithelial cell; 04-FEB-2000; 2000US-0180312P. 26-MAY-2000; 2000US-0207456P. 30-JUN-2000; 2000US-00608408. 30-JAN-2001; 2001WO-US000670 (first entry) cervical cancer; ss. WO200157278-A2. Homo sapiens 12-OCT-2001 09-AUG-2001.

```
The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       258 GIGCCAGCIGCCAASGCCCAGCCIGCACAGAAAATCCCITTGCIAAGGCAAACG

                                                                                                                                                                                                                                                                                                       Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon ancroarrary, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of aiseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at [tp.wipo.int/pub/published_pct_sequences]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    318 ACGCIGCTAATAGTGCAGAGACAGCGACAGTGACCCGAAAGAAACGGCCTAGCGCCTGATG

The introlled tetales to a spatially-douterssoure set of single expression in a sample derived from human breast and BT 47 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They care useful for gene discovery, and for determining predisposition and/or prognosing breast discovery, and for determining predisposition and/or prognosing breast discovery, and for determining predisposition and/or prognosing breast discovery, and for determining predisposition and/or prognosing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this contint did not form part of the printed specification, but was obtained try.

The property of the invention of the printed specification, but was obtained try.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              439
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     378 GCCAAGATGCCGAAGATGAGGAGGCCACTCCGCACGAGCTTCAAGAACCCATGACCCTAA 319

The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

cc from human lung comprising single exon mucleic acid probes having one of from human lung comprising single exon mucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample collection of detectably labeled nucleic acids derived from human lung array with a collection of detectably labeled nucleic acids derived from human lung array, identifying exons in a eukaryotic genome, comprising (a) array, identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNM, to a single exon probe, having a fragment identical to the predicted exon, the probe is included comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one probes/open reading frames (ORP). The probes are used for gene expression classifier and for identifying exons in a gene, particularly using human curry fabrases (IDD), familial idiopathic pulmonary diseases such as asthma, lung diseases (IDD), familial idiopathic pulmonary disease, hermanskylaist, and for identifying exons in a gene, particularly princes, lymphangloleinmynomynessis, pulmonary hermanskylaister, with the Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length Primer sets for synthesizing polynucleotides, particularly the 5602 CDNAS.

Claim 1; SEQ ID NO 2494; 2537pp + Sequence Listing; English.

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polyuncleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a coligonucleotide which comprises a 1'-end sequence complementary to a coligonucleotide which comprises a 1'-end sequence of polynucleotide of the sequence of sequence complementary to a coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence 1'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in specification. The primer sets can be used in antisense therapy and in specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the comprise and of etection and/or diagnosis of the abnormality of the proteins encoded by collspandard and any specialised methods. AAH13612 to AAH13628 and AAH13613 to AAH13612 represent human amino acid sequences; and AAH13629 to AAH13612 represent consent invention of the invention present invention

```
The invention relates to an isolated human protease nucleic acid molecule comprising a nucleotide sequence of 546 base pairs, one of 268 fully defined in the specification. Also disclosed are production of an isolated polypeptide encoded by the nucleic acid, comprising introducing to the nucleic acid into a host cell and culturing under conditions to the encoded protein from the nucleic acid, use of an antibody to detect the encoded protein in a sample and to modulate its in vivo activity, identifying agents that bind to the protein and identification of a complement (i.e. gene therapy). The nucleic acid can be used to its complement (i.e. gene therapy). The nucleic acid can be used to identify an agent that modulates the expression or activity of the nucleic acid, and can be used to isolate the protein. The nucleic acid can be used in diagnostic assays for determining nucleic acid expression as well as activity in the context of a biological sample (e.g., blood, serum, cells, tissue) to determine whether an individual has a disease or disorder, or is at risk of developing a disease or disorder, associated with aberrant expression or activity of the nucleic acid. The nucleic acid can be used to detect mutations in protease genes and gene compared to probes to detect naturally-occurring genetic mutations in a protease gene. The nucleic acid can be used to diagnose and treat cuch protease mediated disorders e.g., proliferative, differentiative,

developmental or haematopoietic disorders. The nucleic acid can be used as probes, primers, in bloogical assays, to determine patterns of gene expression, to design ribozymes and to construct transgenic animals. The present sequence represents one of the 268 disclosed human G-protein-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Probe #4939 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human single exon nucleic acid probes (SEN). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a

                                                                                                                                                                                                                                                                                                                        270
              expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The

                                                                                                                                                                                                                                                                                                          270
                                                                                                                                                                                                                                                                               491
present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders

The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  passessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional microarrays. The method is suitable for rapid production of functional nucleic acid probe of the invention. Note: The sequence is a single exon patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

          The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention
                                                                                                                                                                                                             390

measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is sessciated with coronary heart disease. ABS25011-ABS51005 represent human sequence information for this patent does not appear in the printed sequence information for this patent does not appear in the printed security.

The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe breast. The probes are useful for a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, include: breast cancer, disorders of development, inflammatory diseases include: breast cancer, fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to a spatially-addressable set of shalpe exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12897 open reading frames derived from the 12614 or probes. Also included are a microarray comprising the novel set of probes which hybridiste at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung; comprising (a) contracting the array with a callection of derectably labeled nucleic acids derived from human lung; comprising (a) contracting the label detectably bound to each probe of the array; identifying exons in a enkaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of algorithmically predicting at least one exon from genomic sequences of the enkaryote; and (b) detecting specific by hypridisarion of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the microarray assigning exons to a single exon tissues and/or cell types using hybridisation to a single exon tissues and/or cell types using hybridisation to a single exon tissues and/or cell types using hybridisation to a single exon tissues and/or cell types using hybridisation to a single exon tissues and/or delivers and expression of the exons should be assigned to a single gene, a peptide comprising or probes/pept reading frames (OR). The probes are used for gene expression of the exons should be assigned to a single gene, particularly using human to compose, peptidences, mentivoned manalysis, and for identifying exons in a gene, particularly us The invention relates to a spatially-addressable set of single exon Spatially-addressable set of single exon nucleic acid probes, used Score 205; DB 6; Length 489; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    373
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          198 CCCTAGGTGGCATCGCTCCTCCACAGAAAGTTCTTTTCCCATCTGAGAAGATTGTC 139
                                                                                                                              Probe #14126 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was contained in electronic format directly from NIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   433

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   19
                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TTAAGTGGCAACAAACTCATAGAGTTGGAGCTGGGCTCCCAGAATTTGGGCAATACCTGTT

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast discass. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of assessing the toxicity of chemical agents on cells. The method is suitable for rapid production of functional microarrays. The method is suitable for rapid production of functional microarrays. The method is suitable for rapid production of functional microarrays. The method is suitable for rapid production of functional models are form part of the printed sequence is a single exon part did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     373

Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            associated with coronary heart disease. ABS25011-ABS51005 represent human liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipidaemia which is hyperlipidaemia and hypercholesterolaemia which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 373

The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and noncarcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel single exon nucleic acid probe used to measuring gene expression in a human breast.

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic; the novel set of probes which hybridise at high stringency to a nucleic derived from human lung, comprising (a) contacting the array with a sample collection of detectably labeled nucleic acids derived from human lung collection and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a)
Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                 Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia;
                                                                                                                                                                                                                                                                          Human genome-derived single exon probe ORF from lung SEQ ID No 17503.
                                                                                                                                                                                                                                                                                                        Human; ds; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease;

cc algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method tissues and/or cell types using hybridisation to a single exon tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the expression of the exons in the probes a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes of probes/open rading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human confined mental frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human canner of the study of lung diseases such as asthma, lung disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-CC ender, ofronic obstructive pulmonary fibrosis, pulmonary in the syndrome, fibrocystic pulmonary disease. The histiocytosis, lymphangioleiomyomtosis, pulmonary large exon probe open reading frame of the histiocytosis, lymphangioleiomyomtosis, pulmonary hypertension and hyaline membrane disease. The dyskinesis, pulmonary hypertension and hyaline membrane disease. The sequence is a single exon probe open reading frame of the invention. Note: The sequence data for this patent did not form part of invention. Note: The sequence data for this patent did not form part of invention and propertication, but was obtained in electronic format directly

```
The present invention relates to novel human nucleic acid sequences (I).

The present sequence is one such nucleic acid sequence. Expression of (I) are implicated in tumour suppression or reversion and apoptosis and viral resistance. (I) are useful as probes or primers for detecting, and integers and sequences, as antisense reagents and for recombinant production of polypeptides. (I), polypeptides (II) encoded by (I), vector containing (I), cells containing these vectors and antibodies (Ab) against (II) are all useful for treatment/prevention of viral, tumour and cell degeneration diseases (sepecially neurodegeneration, such as Alzheimer's disease and schizophrenia). Analysing the expression of (I) is also useful for disposits and/or prognosis of such diseases. Transgenic animals carrying (I) are used for studying the aetiology of these diseases (also immune and inflammatory diseases). Note: In the present specification, SEQ ID 1 to 2270 are shown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ·;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       08-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-SEP-2000;
The invention relates to an isolated polynucleotide (ABN27253-ABN33262) with cytostatic activity. The polynucleotide is used to produce a polypeptide, to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and to inhibit tumour growth. The polynucleotide is used as a probe in mapping and tissue profiling. The encoded polypeptide and antibodies to the polypeptide can also be used for therapeutic and diagnostic purposes. The polynucleotide is useful for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

Ruben SM; (HUMA-) HUMAN GENOME SCI INC Barash SC, Rosen CA,

2001-483426/52. WPI; 2001-483426/ P-PSDB; AAM84526 Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Claim 1; SEQ ID NO 2367; 3071pp + Sequence Listing; English.

```
and
AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis an treatment of diseases associated with inappropriate (I) expression. For
```

(INCY-) INCYTE GENOMICS INC.

```
example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) mucleic acids into a host cell and culturing the cell, by inserting the protein. (I) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic-elated diseases, especially cancers and cancer metasteses of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM8169
                                                                                                                                                                                                                                                                                                                                                           2054

The invention relates to human RNA metabolism proteins (RMEP) and their corresponding cDNA molecules. RMEP and its DNA are used for diagnosing, treating and preventing nervous system disorders (epilepsy, dementia, crown and preventing nervous system disorders (epilepsy, dementia, crown diseases; Alzheimer's disease, Huntington's disease, Parkinson's disease); prion diseases; fatal familial insomnia, nutritional and metabolic diseases of the nervous system; inherited, metabolic, endocrine and toxic amnesia and Tourette's disorder; untoimmune'inflammatory disorders (AIDS-acquired immune deficiency syndrome, allergies, anaemia, asthma; cut atherosclerosis, Crohn's disease, diabetes mellitus, glomerulonephritis, atherosclerosis, Crohn's disease, diabetes mellitus, glomerulonephritis, arthritis, osteoporosis, pancreatiis, systemic lupus erythematosus, ulcerative colitis, and infections); cell proliferative disorders (cancer cremiques, gene therapy and for creating transgenic animals. The present sequence is human RMEP-4 cDNA.
                                                                                                                                                                                                                                                                           New human RNA metabolism protein for diagnosing or treating nervous system disorders, autoimmune/inflammatory disorders, cell proliferative disorders and developmental disorders.

/*tag= a/product= "Human extracellular matrix and cell adhesion Location/Qualifiers molecule (XMAD)"

The present cDNA sequence encodes human extracellular matrix and cell adhesion molecule (XMAD). The XMAD is used for screening a compound for adhesion molecule (XMAD). The XMAD is used for screening a compound for effectiveness as an agonist or antagonist or antagonist or condition associated or increased expression of functional XMAD. The control of the decreased or increased expression of functional XMAD. The polymucleotides encoding XMAD are useful in somatic or germiline gene confit conditionally control of the product and to express a protein which affords protection lethal gene product and to express a protein which affords protection cassociated with expression of KMAD. They are also used for generating confident in mapping the naturally occurring genomic hybridisation probes useful in mapping the naturally occurring genomic hybridisation probes useful in mapping the naturally occurring genomic capturals (mice or rats) to model human diseases. Oligonucleotide or longer fragments derived from the polynucleotide sequences may be used as cimimals (mice or rats) to model human diseases. Oligonucleotide or longer fragments on a microarray. Antibodies which specifically bind XMAD may be elements on a microarray. Antibodies which specifically bind XMAD biseases diagnosis of diagnosis of disorders such as acquired immune deficiency capturing for the diagnosis of disorders such as acquired immune deficiency capturing for the diagnosis of disease, allergies, anaemia, asthma, atthma of the disease, allergies, anaemia, acopic dermatitis, subcretis, multiple sclerosis, Grave's disease, osteoorthritis, captured including parasitic, protozoal and helminthic infections and cannot including becate; bladder, bone marrow, brain and uterus contains and cernial proliferative disorders such as actinic keratosis, arteriosclerosis cand cannot including becate; bladder, bone marrow, brain and uterus New human extracellular natrix and cell adhesion molecules and polymuclectide sequences encoding them, useful for diagnosis, prevention, treatment of genetic, autoimmune and cell proliferative disorders. cancer, leukaemia, adenccarcinoma, lymphoma, melanoma and myeloma l P, Burford N, Azimzai Y, Patterson C; Shah P, Au-Young J; Sequence 733 BP; 107 A; 240 C; 245 G; 141 T; 0 U; 0 Other; Claim 5; Page 131; 135pp: English. 05-DEC-2000; 2000WO-US032990. 99US-0172652P.
